

Pipe Clamping Mattress (PCM)

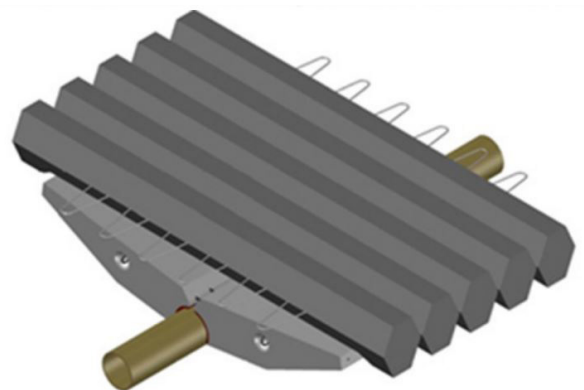

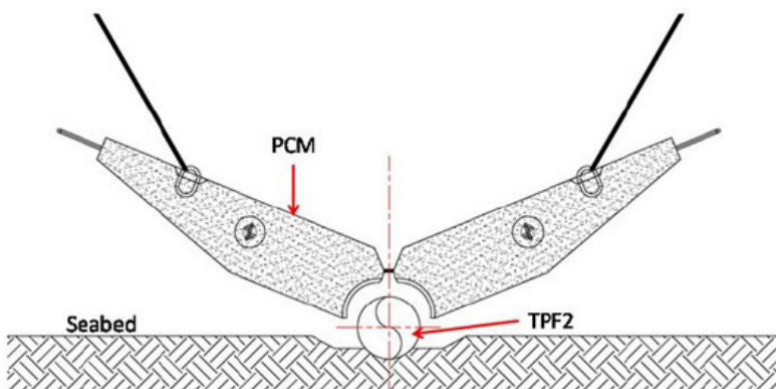

Brochure

Summary

We specifically engineered a Pipe Clamping Mattress (PCM) that revolutionises pipeline walking mitigation in the global oil and gas industry.

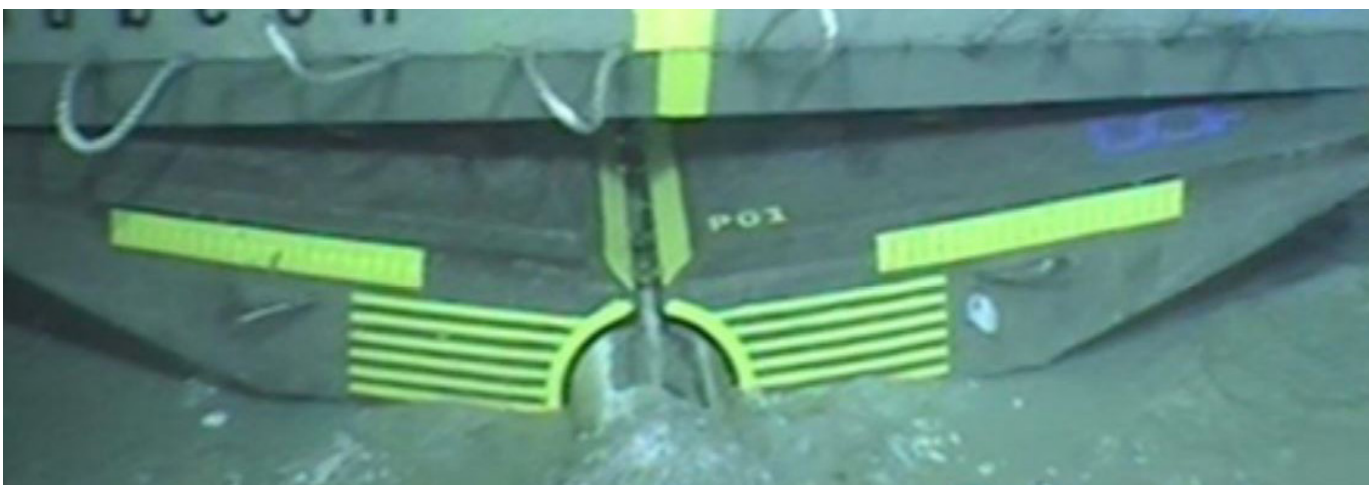

The MMA Pipe Clamping Mattress (PCM) transfers 100% of the ballast directly onto the pipeline, which reduces over 60% of materials, logistics and installation time in comparison to rock dumping and standard concrete mattresses. It is a superior solution over suction pile anchors and removes the need for expensive heavy-lift T & I vessels.

Our PCM is the most efficient system in the market for increasing pipeline axial friction and can be used for multiple pipeline stabilisation requirements in addition to walking mitigation.

The PCM can be used in conjunction with our X-Matt product to accurately promote lateral buckling at specified locations. The Pipe Clamping Mattress is effective for:

- Mitigating pipeline walking
- Increasing buckle control
- Increasing axial friction
- Securing both flexible and rigid pipe
- Optimising tie-in spool design
